

Irvine

Water, Sewer, and Storm Drain Improvements

- Upgrades deficient portions of the 45-year old campus storm-drain system.
- Provides additional capacity to manage increased runoff and provides facilities for water treatment to comply with current State and federal storm-water regulations.
- Constructs replacement or parallel sewer piping in deficient sections of the sewer backbone system and constructs a bypass line to handle additional waste.
- Provides an additional potable-water/fire-suppression water line to provide increased water pressure and additional water supply to the campus.
- Supports campus goal to upgrade and expand infrastructure to support current and planned development.
