1. Total Entity include Other Endowments and Planned Giving Investment assets and is net of the STIP balances in other portfolios.
2. UC Entity benchmark is a blend of the benchmarks of the funds in the table above, each weighted by the percentage it represents of the total assets.

Note: Policy benchmarks are defined in Appendix 2. Total Market Value includes \$329 million held in Liquidity Portfolio. The method of rounding may produce the appearance of minor inconsistencies in various totals and percentages, but the differences do not affect the accuracy of the data.

1. See Private Equity Performance information on page 13 for comparison of Private Equity to multiple performance metrics.
2. Benchmark for Absolute Return (AR) class was changed effective March 1, 2009, from TBills + 450 bp to 50% HFRX-AR Index + 50% HFRX-MD Index.
3. Inception date for Real Assets and Cross-Asset Class Strategy was April 1, 2010.
4. Inception date for Opportunistic Equity was March 31, 2013.

I. Performance Objectives

1. UCRP annualized total return (net of manager fees and expenses) was 9.60% over the past three years and 12.69% over the past five years, in comparison to the Plan's actuarial rate of return of 7.5%. UCRP annualized total return outperformed its policy benchmark by 79 bp and 86 bp over the three- and five-year periods, respectively.
 2. The Consumer Price Index over the past three-year and five-year periods was 1.89% and 2.05%, respectively.
- II. For information on the portfolio's risk exposures, see page 6. During the past quarter, the portfolio's total risk was similar to the budget and within allowed ranges. The portfolio's active realized risk was 64 bp, well below the budgeted level of 300 bps. The projected active risk at June 30, 2014, was 125 bp. (See next page.)
- III. Net investment expenses incurred by the Office of the Chief Investment Officer for managing the public securities (excluding Alternatives) of the UCRP were (expressed as a percent of assets at June 30, 2014) 5.9 bp for the quarter (not annualized) and 27.4 bp for the preceding 12 months. Earnings from the Securities Lending program are added back to the portfolios from which the securities were lent, contributing to higher performance and offsetting other costs.

Results shown are based on (a) total fund composition as of quarter-end and (b) long-term volatility and correlation estimates for 22 risk factors (market benchmarks).

- Risk estimates are in units of standard deviation, annualized (range of likely results over one year horizon).
- Factor exposures for each portfolio are estimated by regressing monthly returns over all risk factors.
- Factors grouped into five broad categories, e.g., Domestic Equity consists of six risk factors. Non Marketable includes PE and RE factors.
- Risk contributions for each factor are derived by a weighted sum of the covariances of that factor with the total fund.
- Benchmark is the "current" policy weight adjusted for illiquidity.

* The UCRP and GEP Active U.S. Public Equity Portfolios are similar in composition (managers and weightings); therefore, this report applies to both Funds but represents the UCRP.

- Portfolio and benchmark characteristics are from Style Research, Inc.
- Risk factor exposures, risk estimates, and performance attribution uses proprietary data and analytics from MSCI/Barra, Inc.
- The benchmark for Active U.S. Equity is the Russell 3000 tobacco free index.
- Risk factor exposures and risk estimates are based on actual holdings as of 06/30/14. These are forecast (ex-ante) values using MSCI's BIM301L/GEM2 risk model.
- Performance attribution covers the period 03/31/14 to 06/30/14 (single quarter, not annualized). It is based on monthly holdings using a buy-hold methodology so calculated returns might differ slightly from the official performance report (returns are shown net of fees). The risk values are historical (ex-post) values using MSCI's GEM2 factor attribution model.
- Style factor exposures are expressed in units of Standard Deviation.
- Industry sector exposures and country/regional exposures are expressed in terms of percent weights. Sector exposures for U.S. Equity are based on GICS (Global Industry Classification Standards), consistent with Non-U.S.(Developed) Equity. Totals may not add to 100% due to managers' cash holdings.
- MCTR = Marginal Contribution to Total Risk is a risk sensitivity measure. It approximates the change in portfolio total risk that results from a 1% change in the factor exposure.

UCRP AND GEP

Performance evaluation and benchmarking of Private Equity investments

The Office of the Chief Investment Officer uses industry standard metrics (Net Internal Rate of Return, or Net IRRs) to evaluate performance of individual PE funds. Long-term (10 years) time weighted returns of the PE program are compared to relevant market indexes. The use of Net IRRs is mandated by the CFA Institute for calculating and reporting PE performance. Meaningful performance can only be evaluated at the end of a fund's life. Net IRRs cannot be compared to time weighted returns (e.g., market index).

Table 1 is provided to aid in the evaluation of UC's PE program, and to supplement the time-weighted returns which have been reported in the past (see Table 2 below). In Table 1, PE funds are grouped by Vintage Year, showing Commitments, Contributions, Distributions and estimated remaining Net Asset Value (NAV). Performance is compared to the Venture Economics All Private Equity Universe fund median IRR ("Benchmark"). UC Fund and Benchmark IRRs are weighted by the dollar amount of contributions into the fund (i.e., the investment base). The column "Weighted Excess Return" is the difference between the Weighted Vintage Net IRR and the Weighted Benchmark Net IRR, and is a measure of Fund selection skill. The last column, "Multiple" shows the ratio of Distributions + NAV to Contributions, and is another measure of Fund value added. "Net" means net IRR to Limited Partners, i.e., after fees and expenses.

Table 1 shows data, as of December 31, 2012, the latest period for which fund information is available. This information will be updated annually.

- Aggregate portfolio forecast risk at 06/30/14 was 7.82% vs. guideline limit of 8.0% of total invested capital.

1. Market value in each of the four broad strategies permitted in the Investment Guidelines (as amended July 19, 2012).
2. Additional detail of current investments by strategy.
3. Aggregate exposures to systematic risk factors as determined by statistical analysis and current holdings.
4. First three lines (labeled "Forecast") is a forward estimate of risk, considering both current systematic exposures and the historical volatility of residual returns. "Realized" volatility is based on prior 12 months' returns.
5. Monthly returns compared to official, style (systematic risk) benchmarks, and HFR Fund of Funds median return.

Note: Performance benchmark changed March 1, 2009, from Tbills +450 bp to 50% HFRX AR Index + 50% HFRXMD Index. The new benchmark is shown in Charts 4 and 5 as if it had been in place during the entire period.

2. The Consumer Price Index over the past three-year and five-year periods was 1.89% and 2.05%, respectively.

II. For information on the portfolio's risk exposures see page 18. During the past quarter, the portfolio's total risk was similar to the budget and within allowed ranges. The portfolio's active realized risk was 94 bp, well below the budgeted level of 300 bps. The projected active risk at June 30, 2014, was 146 bp (see next page).

III. Net investment expenses incurred by the Chief Investment Officer for managing the public securities (excluding Alternatives) of the GEP were (expressed as a percent of assets at June 30, 2014) 8.9 bp for the quarter (not annualized) and 49.9 bp for the preceding 12 months. Earnings from the Securities Lending program are added back to the portfolios from which the securities were lent, contributing to higher performance and offsetting other costs.

- Factor exposures for each portfolio are estimated by regressing monthly returns over all risk factors.
- Factors grouped into five broad categories, e.g., Domestic Equity consists of six risk factors. Non Marketable includes PE and RE factors.
- Risk contributions for each factor are derived by a weighted sum of the covariances of that factor with the total fund.
- Benchmark is the "current" policy weights adjusted for illiquidity.
