

UCOP Wireless Network

- **We now have complete open wireless network coverage in all of our public areas and over 55 conference rooms throughout the UCOP campus.**
 - **The wireless network is configured for open access to allow all UCOP guest and employees to use.**
 - **Everyone is granted basic internet access, users were informed that their wireless connection was not secured and basically equivalent to the same type of wireless connection you would receive at Starbucks, Airports, and Hotels.**
 - **Our Wireless network is placed outside our firewalls**
 - **This mitigated against any wireless security attacks against our internal network.**
 - **UCOP employees could then use our VPN and obtain access to internal resources and to use the wireless in a secured manner.**
 - **The VPN (Virtual Private Network) provides a highly secured, authenticated, and encrypted communication over the wireless network.**
