

SSN & ONLINE SCREENS

Attachment to Service Request #16923

December 15, 2003

Revised 3/3/04

To protect an employee's privacy, it is necessary to reduce the number of places within the Payroll/Personnel System where the Social Security Number (SSN) is displayed. The modifications outlined below do not apply to the Web EDB Inquiry.

The following changes should be applied to CICS online screens.

1. The employee's SSN (EDB 0111) should be deleted from the following browse screens: EDB (WHO), PAR (IBRS), History (HWHO, ILOK).
2. Since the SSN is being deleted from the browse screens, the ability of the user to enter a partial SSN is no longer required. If there is not an exact match on SSN, when entered in the footer section of the screen, error message "P0017 No match on entered ID or SSN. Use WHO to browse." should be invoked or the appropriate message for the subsystem. Users should retain the ability to enter a partial employee name or identification number.

These modifications should be implemented no later than July 1, 2004.
