

SR 81266

Fix for SX Lump Sum Payment Program

July 1, 2005

The SX Lump Sum Payment program (R1646) should be modified so that the 'LSI' DOS code is handled in the same way as the 'IAP' DOS code during the payroll compute, so that the LSI payments are correctly applied to IAP fund sources. In addition, the functionality to specify an FAU using a specification card should be removed from the program.
