Writing is pivotal to learning. No matter what students are studying, they benefit when they use writing to understand concepts, solve problems, communicate ideas and make sense of what they read and learn. The mission of the California Writing Project (CWP) is to improve student writing and learning by improving the teaching of writing.

The goals and strategies that follow are at the heart of every CWP program:
• Concentrating efforts in regions where literacy is most in jeopardy
• Preparing students for the work of writing — in school and college, in the workplace and community
• Emphasizing instructional approaches for developing the writing and reading skills of English learners
• Supporting teachers as they prepare students to meet and exceed California standards
• Serving California teachers, students, schools and districts through a model of university/school collaboration

In the work of CWP, [we] see that the capacities built up in all previous years come to bear on the mission to strengthen teaching and learning ... These capacities include the specialized knowledge and skills that teachers hone while teaching California’s diverse students, the leadership that CWP representatives exercise in their institutions, and the project’s statewide presence as a vital professional community of inquiry. ... We applaud CWP for its sustained commitment to developing all students as effective writers, and to strengthening the teaching profession.”

INVERNESS RESEARCH ASSOCIATES

LEADERSHIP
CWP sites conduct Invitational Leadership Institutes in the Teaching of Writing that prepare teacher consultants through intensive inquiry into effective writing and assessment practices, supporting research, and the student writing that results. Teacher consultants write to gain firsthand experience in the writing they teach and the interventions students need to improve their writing. Through ongoing leadership development programs, teacher consultants create and lead professional learning opportunities for their colleagues that address school and district needs: linking district curricula to California standards, assessing writing to inform instruction, improving argument writing for college, career and community readiness, and teaching writing with digital tools.

Each year, over 2,000 CWP teacher consultants engage in a variety of leadership activities:
• Classroom coaching and mentoring
• Partnerships with schools and districts
• School-based professional learning communities
• Youth writing academies
• Family literacy programs

PROGRAMS
CWP collaborates with schools and districts to tailor professional development programs to the local needs of students, teachers and administrators.

College and Career Readiness — Improving Students’ Analytical Writing is a statewide program that focuses on accelerating the analytical writing and critical reading improvement of all students. This program fosters collaboration among high school, community college and university instructors to prepare students for college and career readiness.

Support for California Standards — CWP programs build knowledge of CCSS-aligned* instruction and assessment, integrate CCSS into school writing programs, and place discipline-specific literacy at the core of teacher support. Programs also focus on connecting ELD standards with CCSS to support equitable classroom opportunities for English learners, as well as on strengthening the learning connections between home and school.

Digital Writing, Teaching and Learning — CWP provides programs that link technology-mediated instruction and assessment to the CCSS, strengthen student learning by developing 21st-century skills and address media literacy.

*Common Core State Standards
IMPACT
CWP has a positive, long-term influence on teachers and their students, as evidenced by numerous research and evaluation studies conducted with K–12 schools and districts.

Improving Students’ Analytical Writing (ISAW)
This study investigated a two-year ISAW program to provide sustained partnerships with teams of teachers from 18 low-performing high schools in urban and rural areas. Students of ISAW teachers outperformed their counterparts with significant differences in all seven attributes of writing as measured by the National Writing Project’s Analytic Writing Continuum assessment system. Likewise, differences were seen in all 18 attributes of writing as measured by the ISAW Analytical Writing Improvement Continuum assessment system.

Evaluating Outcomes through a Professional Development Program in the Teaching of Writing
This study examined teacher and student outcomes of a partnership focused on writing improvement in four schools serving high-poverty populations with substantial numbers of English learners. Students of participating teachers outperformed their comparison counterparts on pre/post writing measures.

“CWP programs have been completely transformative. I have become the kind of teacher I’ve always wanted to be, as CWP has taught me strategies for success and given me the confidence to trust in my own expertise. My students genuinely engage in all of my courses, and, overall, they consider themselves capable writers!”
