ACCESSIBILITY FRIENDLY FEUD

Overall, roughly 26% of Americans college-aged or older experience a disability – that's one in four of us. Incorporating accessibility into your work is one of the best ways staff of any level – from senior leaders down to our fantastic student workers – can contribute to UC's equity, diversity, inclusion and belonging missions. When you look at those numbers, by engaging in accessibility, we have the opportunity to improve the experience of so many individuals, including many of those we're reaching through other efforts who need a more accessible experience.

QUESTIONS
