IV. INSTITUTIONAL AID AWARDS.....	9

I. OVERVIEW

In September 2002, the California Legislature adopted Supplemental Report Language directing the University of California to report to the Legislature each year on its institutional aid programs. This document responds to that legislative request.

The Goals of the University's Undergraduate and Graduate Financial Aid Programs

The financial aid programs available to University of California students do more than provide individual students with financial assistance to help cover their expenses. Considered together, they are critical to the University's success in carrying out its missions of instruction and research. Viewing undergraduate and graduate financial aid programs in terms of the University's missions is fundamental to understanding these programs and their success.

The University's Instructional Mission and Financial Assistance for Undergraduates

California's Master Plan for Higher Education calls for the University to select its undergraduates from among the top one-eighth of graduating high school seniors. The University's undergraduate financial assistance program is built around the goal of ensuring that financial concerns are not a barrier to eligible students choosing to attend the University. Consequently, most undergraduate financial assistance at UC is distributed on the basis of family financial circumstances. This assistance is intended to make the University accessible to students who could not otherwise afford to attend UC.

The University's Research Mission and Financial Assistance for Graduate Students

The University's graduate student enrollment is tied most directly to the University's research mission. The first point of enrolling graduate students is not to serve a designated pool of Californians – indeed, there is no Master Plan goal for graduate enrollment analogous to that for undergraduate enrollment – but rather to further both the University's role in helping the state meet its professional workforce needs and the University's research mission, which makes important contributions to the California economy. These contributions are maximized when the University attracts the top candidates from the pool of prospective graduate level students.

This means that the goal of graduate financial support differs substantially from that of undergraduate support. Graduate financial support is intended not simply to make the University accessible, but also to serve as an important recruitment tool, the success of which is tied closely to whether UC's offers of financial assistance are competitive with those made by other universities competing for the same students. Thus, while most graduate students are needy, graduate level assistance at UC is distributed largely based on merit in order to increase its effectiveness at recruiting strong graduate students.

II. INSTITUTIONAL AID FOR UNDERGRADUATE STUDENTS

The Cost of Attendance

The University of California's undergraduate financial assistance programs are designed to make the University accessible to all eligible students. Put another way, they are designed to make the full cost of attending the university – known as the cost of attendance or the student budget – manageable for eligible students and their families, irrespective of their family resources.

Undergraduate student budgets vary by factors such as a student's residency status, campus, and living arrangement (living with parents, on campus, or off campus). The average UC undergraduate student budget for the 2001-02 academic year for a California resident living on campus is shown below.

Average Student Budget for a California Resident Living On Campus, 2001-02

Student Fees:	\$3,849
Books and Supplies:	1,191
Living Expenses: ¹	8,464
Personal Expenses:	1,242
Transportation:	838
Healthcare Allowance:	<u>489</u>
TOTAL:	\$16,073

Since 1998-99, student budgets at the campus level have been determined according to results of the systemwide Cost of Attendance Survey (COAS). The COAS, first conducted in 1997 and then every three years thereafter, provides the most comprehensive data available on the non-fee expenditures of undergraduates attending the University. The survey's results are significant because they provide a standardized basis for the determination of the student budgets used by each campus. These budgets reflect local economic conditions and student spending patterns.

¹ Includes room, board, phone, and utility expenses.

Managing the Cost of Attendance: the Education Financing Model

The University's approach to student financing is built around an integrated conceptual framework that is used to:

- Guide its work in helping students and their parents manage the cost of an undergraduate education,
- Define its role in funding the University's undergraduate student financial support programs, and
- Determine how much undergraduate financial aid to allocate to each campus.

This framework, known as the Education Financing Model (hereinafter "the Model"), is based on the following set of principles:

- Total cost of attendance (resident student fees, books and supplies, living and personal expenses, and transportation) represents the context for the Model;
- A partnership among students, parents, federal and state governments, and the University is required for the successful implementation of the Model;
- Equity of expectations is needed across the entire undergraduate student body, so that all students – without regard to family income or resources -- will be called upon to make a similar contribution from loan and work toward their cost of attendance; and
- Flexibility is needed for students in deciding how to meet their expected contribution and for campuses in implementing the Model to serve their particular student bodies.

The Model is built upon a simple framework. In narrative terms, the framework says that the cost of attendance or student expense budget minus 1) a reasonable parent contribution calculated according to federal standards, 2) anticipated grant aid from state and federal sources, and 3) a manageable student contribution from loan and/or work, equals the amount of University grant aid needed.

Understanding how the University's undergraduate institutional aid program is administered requires a general understanding of each of the elements of the framework. These elements are explained below.

- **Student Expense Budget:** The student expense budget represents an estimate of a student's costs while attending college. This budget accounts for expenses such as student fees, books and supplies, room and board, transportation, and personal expenses, and reflects differing expenses associated with different campuses and different living arrangements.

- **Parent Contribution:** The expected contribution from parents is calculated in accordance with the federal needs analysis methodology.
- **Federal and State Grant Aid:** Federal and state grant aid is extremely important to UC students. Grant aid is what reduces the need for students to work and borrow to cover their educational costs, and together, federal and state grants account for over 60 percent of the grants received by UC undergraduates.

The Conceptual Framework of the Education Financing Model

Student Expense budget (cost of attendance):

Less Reasonable Contribution from Parents

Less Federal and State Grant Aid

Less Manageable Student Contribution from Work and Borrowing

Equals University Grant Aid Needed

- **Manageable Student Contribution from Work and Borrowing:** While University financial aid recipients are expected to contribute to their expenses, the goal of the Model is to keep the hours worked and student debt levels within a manageable range, and to keep the total student contribution consistent across income levels.
- **University Grant Aid:** University grant assistance is awarded to students whose full cost of attendance is not covered through sources listed above. Without the University grant to cover remaining expenses, some students would be left facing the need to work or borrow at higher levels. This would be inconsistent with the principle calling for equity in expectations.

What do the principles of the Model mean for the parents of UC undergraduates?

- As they prepare for their role in financing the cost of a UC education, parents need to consider the entire cost of attendance, rather than merely the fees charged by the University. Under the Model, campuses employ a cost of attendance figure that, in addition to fees, reflects an average of what current students report as the expenses directly associated with attendance at the University, such as room and board, books and supplies, transportation, health care, and other personal expenses.
- Parents will be expected to contribute toward this cost of attendance to the extent they are able, as defined by federal standards, which take into account parental income and assets (excluding home equity), as well as other factors such as family size and the number of family members in college. Parents with particularly limited resources may have no contribution expected of them.
- The federally defined parent contribution rises rapidly as income increases, and most middle-income parents find that current income is not sufficient to meet their assigned contribution. Therefore, parents with a parent contribution need to be prepared to meet at least a part of their expected contribution by planning and saving beforehand and/or by

borrowing once their son or daughter is enrolled. Students whose parents do not fulfill their part of the education financing partnership will face an additional work or debt burden in order to cover their total cost of attendance.

What do the principles of the Model mean for UC students?

- All undergraduates can expect to be called upon to cover part of their cost of attendance through a combination of funds borrowed and wages earned. This “loan/work expectation” is not identical for all students: it will vary according to campus resources and financial aid policies. However, the Model establishes a range that will serve as a guide for campuses. The goal of this range is to keep the loan/work expectation at a level that will enable students to make steady progress toward completion of the baccalaureate degree (i.e., to work no more than 20 hours per week during the academic year) and to meet their repayment obligations after graduation.
- Students will be able to affect the amount of their loan/work expectation in a variety of ways. By reducing expenses, students can lower their total cost of attendance and thereby the amount they will need to earn and borrow. Conversely, students who spend more than the average or who incur expenses that are not directly related to attendance will have to work or borrow more. Students can also reduce their loan/work expectation by taking advantage of the availability of merit-based scholarships (for example, those based on academic performance, community service, special talent, or other personal characteristics). In addition, students can also plan ahead by saving for their college expenses before they enroll.
- Students also can decide the balance they want to strike between work and borrowing. This balance will depend on their individual preferences, the other resources available to them, their ability to find academic-year employment, and the ability to save most of their summer earnings by working while living with their parents. However, in order to prevent either one of the two components of the loan/work exception from becoming unmanageable, students should plan to borrow and to be employed while they are pursuing their undergraduate degrees.
- Students will be expected to apply for all federal and state financial aid grant programs available to them.
- Students will be expected to meet application deadlines in applying for financial aid. Late applicants are generally assigned a loan/work expectation that is substantially larger than the contribution expected of on-time applicants.
- Undergraduates who are not financially dependent on their parents (according to federal definitions) may be assigned a loan/work expectation that falls outside the range used to guide the contribution expected of dependent students.

What do the principles of the Model mean for the University?

- At the systemwide level, the University's activities in determining funding levels for the University Student Aid Program, determining how these funds are allocated across the campuses, and setting guidelines for awarding those funds to students are carried out in accordance with the principles and framework of the Model. According to the Model, these funds, unlike funds such as endowments, are specifically for providing students with access to the University. The Model does not set out policies and procedures for student financial support funds generated and held at the campus level, thus encouraging campuses to develop additional resources in support of their own enrollment management goals.
- Although future funding levels cannot be guaranteed, the University's goal is to provide sufficient systemwide funding to keep students' loan/work expectations within the range established by the Model.
- The University will develop and update the loan/work expectation range annually. In doing so, the University recognizes that the amount students can contribute from work will depend primarily on the number of hours worked, the wages students can command, and students' ability to find summer jobs that allow them to live with their parents and save the majority of the earnings for use during the academic year. The earnings component of the loan/work ranges is based on the expectation that students will work both during the summer and between 6 and 20 hours per week during the academic year. The borrowing component of the loan /work range reflects the portion of post-graduation earnings that students can be reasonably expected, according to credit industry standards, to dedicate to loan repayment.

III. INSTITUTIONAL AID FOR GRADUATE STUDENTS

The University of California's graduate level financial assistance programs are designed to make the University competitive with other universities seeking to recruit the same graduate students. This means that beyond making the university accessible to students who lack the resources to cover the cost of attending UC, graduate student support programs must serve as a recruitment tool. They must support the University's efforts to compete with other institutions for top-tier graduate students to support its research and workforce development missions.

The Regents of the University adopted the University's student support policies in 1994, immediately after a series of large systemwide fee increases were adopted in the early 1990s. The Regents' policy on graduate student support references the need both to provide opportunity to students from a range of economic backgrounds and to support the University's research mission and workforce development duties. It states, in part:

“The University's graduate student support policy is guided by the University's responsibility to meet the nation's and State's need for a highly educated workforce of faculty, scholars, researchers, and professionals and by the University's interest in providing educational opportunities to students of all socioeconomic backgrounds. In meeting these needs, it is necessary that the University attract a diverse pool of highly qualified students who are willing and able to pursue graduate academic and professional degrees.”

From the Regents' policy, the Council of Graduate Deans derived the four following goals for the University's graduate student support program:

1. **To attract both high quality and diverse graduate students in a competitive environment.**

Since top-tier graduate students are fundamental to any high quality graduate program, they are in demand. Attracting the top graduate students to UC takes not only excellent programs, but also competitive financial support packages. To be competitive, the University must ensure that financial support is available in adequate amounts, in appropriate forms, and for a period of years appropriate to each student's program of study.

2. **To enable students to complete their degree programs in a timely manner.**

This goal is based on the assumption that inadequate support drives students toward employment outside the University, which tends to interfere with progress toward completing a program. Assistance from the university – particularly fellowships and research assistantships – is associated with reduced time-to-degree.

3. **To enable graduate students to meet the cost of attending the University.**

Unlike most of the University's undergraduate students, most of the University's graduate students are self-supporting. Because so many of them lack family resources, they generally need assistance in meeting the costs associated with their graduate education.

4. **To promote the educational objectives of the programs in which the students are enrolled.**

Most graduate programs are structured to provide students with a range of experiences, including opportunities for teaching and research. Student financial support can be structured to facilitate these opportunities.

Graduate enrollments and the University's ability to compete successfully for top graduate students are continuing matters of concern at UC. In September 2001, the University-established Commission on Growth and Support of Graduate Education, whose membership comprised Regents, faculty, students, and administrators, issued its report. The Commission outlined a plan to increase graduate enrollments by 50 percent by 2010 that included steps to increase financial support for graduate students. The steps address the need both (1) to fund a larger number of graduate students and (2) to attract top-notch students as competition increases for these students. The University is currently working with its federal, state, industry, and private/foundation partners on implementing steps to support the expansion of graduate education at UC.

IV. INSTITUTIONAL AID AWARDS

Institutional aid awards take various forms, including grants, fellowships, and scholarships (known collectively as “gift aid”); loans; and work-study opportunities. Funding sources for these awards include student fees, State General Funds, endowment income, gifts, and discretionary funds.

Aggregate award amounts for the 2000-01 and 2001-02 academic years appear below. Detailed statistics regarding award size and characteristics of award recipients appear on the following page.

Undergraduate Institutional Aid Awards, 2000-01 and 2001-02 Academic Years

Type of Aid	Awards to Need-Based Aid Recipients		Awards to Other Aid Recipients	
	2000-01	2001-02	2000-01	2001-02
Grant	\$ 118,286,693	\$ 131,543,115	\$ 926,075	\$ 1,057,661
Fellowship/Scholarship	29,416,317	31,774,717	20,061,782	22,173,881
Total Gift Aid	\$ 147,703,010	\$ 163,317,832	\$ 20,987,857	\$ 23,231,542
Loan	1,790,233	1,912,354	27,604	19,881
Work-Study	31,483	47,331	-	-
Total	\$ 149,524,726	\$ 165,277,517	\$ 21,015,461	\$ 23,251,423

Graduate Institutional Aid Awards, 2000-01 and 2001-02 Academic Years

Type of Aid	2000-01	2001-02
Grant	\$ 29,205,090	\$ 28,302,314
Fellowship/Scholarship	129,580,968	134,925,930
Total Gift Aid	\$ 158,786,058	\$ 163,228,244
Loan	2,474,986	1,294,117
Work-Study	129,828	17,563
Total	\$ 161,390,872	\$ 164,539,924

**UC Institutional Aid Awards,
Academic Years 2000-01 and 2001-02**

Award Type ¹		Undergraduate Needbased Aid Recipients		Other Undergraduate Aid Recipients		Graduate Aid Recipients	
		2000-01	2001-02	2000-01	2001-02	2000-01	2001-02
