Dear Director Bosler and Senator Skinner:

Pursuant to Item 6440-001-0001 of the Legislative Analyst's Office Supplemental Report of the 2019-20 Budget Act, enclosed is the University of California's report to the Legislature on Deferred Maintenance and Seismic Plan.

If you have any questions, Associate Vice President David Alcocer would be pleased to speak with you. David can be reached by telephone at (510) 987-9113, or by email at David.Alcocer@ucop.edu.

Sincerely,

Michael V. Drake, MD
President

LAO Supplemental Report of the 2019-2020 Budget Act Item 6440-001-0001—University of California

Deferred Maintenance and Seismic Plan

I. INTRODUCTION

As requested in the LAO Supplemental Report for the 2019-2020 Budget Act, this report addresses the University of California's Deferred Maintenance and Seismic Plan (Item 6440-001-0001), which includes:

- a) The estimated amount of annual spending by fund source for maintenance of academic facilities for fiscal years 2017-18, 2018-19, and 2019-20.
- b) The estimated annual amount needed to be spent on maintenance of academic facilities to adequately maintain the University's academic facilities and prevent the backlog from growing.
- c) The estimated amount of academic facility maintenance backlog by campus and type of space.
- d) The estimated amount the University would need to spend annually, in addition to the amount specified in (b), to eliminate its existing backlog within ten years, including proposed funding approaches.
- e) A list of each academic building's seismic rating.
- f) A preliminary estimate of the costs to renovate or replace academic buildings with a seismic rating V through VII, and a plan to fund these projects.

This report covers all ten UC academic campuses, as well as UC Office of the President (UCOP), Lawrence Berkeley National Laboratory (LBNL), and UC Agriculture and Natural Resources (ANR). Investments in these facilities are critical to maintain building life-safety and accessibility, University operations and business-continuity and serve to achieve the University's fundamental missions of teaching, research and public service.

II. UC ASSET AND FACILITIES PLANNING & MANAGEMENT

The University occupies approximately 146 million gross square feet (GSF) of space. The University's capital program is driven by the campuses' and medical centers' academic and strategic plans, and is informed by a development and design framework. The Capital Financial Plan (CFP) delineates the University's multi-year program of proposed new construction, renovation, and other capital investment. The [2020-26 CFP](#) represents \$56 billion of capital need over this year and the next five fiscal years (through 2025-26). UC has \$27 billion in unfunded capital need, the majority of which (almost \$21 billion) supports state eligible-education and general facilities. Major objectives of the CFP are aimed at addressing seismic safety and deferred maintenance (DM).

Deferred Maintenance and Seismic Safety Programs

The University continues to make progress in addressing DM and seismic safety needs, most notably with strategic investments in two comprehensive multi-year programs: The Integrated Capital Asset Management Program (ICAMP) and the Seismic Safety Program.

ICAMP is an enterprise database system that houses and maintains data on the condition of facilities based on direct-observation assessments down to the level of individual assets. These data are being used to identify and prioritize DM projects across the system.

The University's Seismic Safety Policy was developed to provide an acceptable level of earthquake safety for students, employees, and the public who occupy University facilities located in California. Policy implementation and oversight is part of UC's ongoing commitment to the safety and well-being of the UC community.

A. DEFERRED MAINTENANCE PLAN

DM is a multi-billion-dollar issue exposing the University to significant operational risk. Unplanned asset system and component failures divert operating funds and management attention to emergent issues which impair or interrupt operations in the costliest, least convenient manner.

The University does not currently track operating expenses by program space type (e.g., academic, medical centers, research, etc.). However, approximately 37% of the total reported Operation and Maintenance of Plant spending, or about \$271.7 million, was state-funded in fiscal year 2019-20. Please see Table 1 for a summary operating expenses for fiscal years 2017-18 through 2019-20. Between fiscal years 2017-18 and 2019-20, the State has provided more than \$273 million for DM projects at the University. Please see Table 2 for a summary of state funding for DM projects for fiscal years 2017-18 through 2019-20.

Table 1. Operation and Maintenance of Plant (OMP) Expenditures, FY2017-18 - FY2019-20 (\$000's)						
	2017-18		2018-19		2019-20	
	\$33,835	5%	\$30,659	4%	\$75,203	10%
Building Maintenance	\$222,853	32%	\$272,689	37%	\$260,524	35%
	\$29,646	4%	\$31,514	4%	\$29,989	4%
Janitorial	\$127,394	18%	\$125,093	17%	\$107,797	15%
	\$4,542	1%	\$5,565	1%	\$16,584	2%
Utilities Purchase	\$244,826	36%	\$251,060	34%	\$222,892	30%
	\$15,430	2%	\$9,953	1%	\$18,636	3%
Fire Departments	\$10,451	2%	\$10,862	1%	\$10,772	1%
	\$688,977		\$737,395		\$742,397	

Table 2. State Funding for DM Projects, FY2017-18 - FY2019-20 (\$000's)				
	2017-18	2018-19	2019-20	Total
	\$50,000	\$35,000	\$35,000	\$120,000
State One-Time Funds	-	\$35,000	\$118,266	\$153,266
	\$50,000	\$70,000	\$153,266	\$273,266

Deferred Maintenance Needs & Priorities

The DM data represent a distribution of needs across campuses. More than 36,000 specific building asset replacement needs have been identified. The “services” asset category comprised of heating, ventilation, and air conditioning (HVAC), electrical, plumbing, and conveyances represent over one-third of the total DM need, with HVAC comprising over half of that amount.

ICAMP categorizes DM need into three priority categories (i.e., red – highest risk, yellow – moderate risk, green – lower risk) based on risk scores reflecting the likelihood and consequence of failure for each asset, and assigns a timeframe for when DM needs should be addressed. It is currently estimated that an excess of \$450 million in highest risk “red” DM should be addressed within 1 year, and approximately \$700 million in total “red” DM (inclusive of priority within 1 year) should be addressed within 5 years. The largest portion of DM identified in ICAMP is characterized as “yellow” – or moderate risk – which represents \$4.4 billion. DM need categorized as “yellow” is likely to become categorized as “red” if left unaddressed.

Asset condition data are continuously and efficiently maintained within ICAMP to enable systematic identification of priorities on an ongoing basis. ICAMP also has the capacity to integrate with other capital planning priorities, such as seismic, energy, accessibility, and other program requirements that will allow the University to further inform decision-making. The ICAMP platform will facilitate lifecycle cost analysis necessary to validate capital investments in UC facilities that are intended to endure much longer than typical buildings.

In addition to DM opportunities for building assets, DM opportunities for infrastructure are being surveyed at the systemwide level. To date, approximately 1,300 DM opportunities for infrastructure, totaling an additional \$1.7 billion, have been identified. This is expected to increase as infrastructure system assessments continue through fiscal year 2021-22. Campus infrastructure systems support multiple campus buildings, e.g., central plants and energy delivery systems, and thus represent a higher risk to operations than individual building systems.

Plan to Address DM Backlog

The estimated amount the University would need to spend annually to adequately maintain its academic facilities and prevent its maintenance backlog from growing can be inferred by taking one-tenth of the 10-year calculated capital renewal need presented in Table 3 – Capital Renewal Needs, or approximately \$1.23 billion per annum.

Additionally, the estimated amount the University would need to spend annually to eliminate the existing backlog within ten years can be found by calculating one-tenth of the directly identified DM need from Table 4 – Deferred Maintenance by Campus, or approximately \$727 million per year over ten years.

While continuous and sufficient funding for asset replacement is optimal, ICAMP enables the University to implement a risk-based re-investment approach that provides some flexibility in UC's position to address DM needs with limited and varied funding availability. Using a risk-based approach for DM funding prioritization consistently ensures the most critical needs, at any given time, can be readily identified and addressed as available funding and resources allow.

Table 3. Capital Renewal Needs (\$000's)					
Campus	State Supported GSF	Academic Facility Renewal Need	Infrastructure Renewal Need ¹	Total Renewal Need	Current Replacement Value
Berkeley	11,190,728	\$3,182,275	In progress	\$3,182,275	\$9,033,454

B. UC SEISMIC SAFETY PROGRAM

The [University of California's Seismic Safety Policy](#) was developed to provide an acceptable level of earthquake safety for students, employees, and the public who occupy University facilities located in California. This initiative is part of UC's ongoing commitment to the safety and well-being of the UC community.

The UC Seismic Safety Policy is applicable to all University facilities within California except (1) those under the regulatory authority of the Office of Statewide Hospital Planning and Development or (2) K-12 schools or community college facilities built after 2018 under the regulatory authority of the Division of the State Architect.

Program Summary

The University adopted its first Seismic Safety Policy (Policy) in 1975. The Policy is reviewed and updated over time to incorporate evolving knowledge in seismology, structural engineering, geotechnical engineering, and lessons learned from past earthquakes, as well as resulting updates to the California Building Code. Technical seismic advice is provided by the UC Seismic Advisory Board, a group of independent structural and geotechnical engineers with seismic expertise appointed by the UC Office of the President (UCOP). Additionally, the University has developed and maintains [UC Seismic Program Guidelines](#) to facilitate the implementation of the Policy.

An initiative was launched in June 2018 to seismically reevaluate and rate the inventory of over 6,000 of UC's California buildings covered by the Policy. This report covers all ten UC academic campuses, as

well as UC Office of the President (UCOP), Lawrence Berkeley National Laboratory (LBNL), and UC Agriculture and Natural Resources (ANR). The evaluations were conducted by licensed structural engineers in a consistent manner throughout the system, as outlined in the UC Seismic Program Guidelines. The revaluation effort was completed in January 2021.

Program Status

Seismic Improvement Scope

As of January 2021, approximately 70 percent of UC buildings covered by the Policy have been identified as compliant. The compliance deadline to meet Policy requirements is December 31, 2030. Table 5 provides a summary of UC's State supportable buildings rated V, VI and VII.

Table 5. Buildings Rated V, VI, and VII	
Seismic Performance Rating	Building Count
V	1,394
VI	104
VII	3

Based on the recent evaluations, UC-owned buildings not in compliance with the Policy have been assigned to seismic improvement Priority Groups A, B, and C. Seismic improvement prioritization considers a range of factors, including but not limited to the building's rating, occupancy risk, collapse risk, mission-criticality, and logistics, and is consistent with [UC Seismic Program Guidelines, Section 4. Prioritization of Seismic Projects](#). Priority Group A buildings are considered priority for improvement in comparison with Priority Group B and C buildings. Tables 6 and 7 provide a systemwide status summary by Priority Group. Attachment 1 provides a list of UC's State supportable, and Priority Group buildings with their ratings and seismic status.

UC systemwide Priority Groups A, B and C consists of approximately 44 million GSF planned for seismic improvement. Priority Group A consists of approximately 18.1 million GSF, Priority Group B consists of approximately 16.9 million GSF, and Priority Group C consists of approximately 9 million GSF (see Table 6).

Estimated Capital Need

The total estimated capital need to address Priority Groups A, B and C is approximately \$20.1 billion. Total capital need estimates include the cost to address the scope of seismic improvements, associated DM and other identified capital program improvements (see Table 7). Priority Group A is estimated to have a capital need of \$7.5 billion. Priority Group B is estimated to have a capital need of \$9.6 billion. Priority Group C is estimated to have a capital need of \$3 billion. Of the total \$20.1 billion in estimated capital need, approximately 10% has funding identified or proposed, while 90% does not have funding sources identified. Further, 77% of the total estimated capital need is State-supportable, while 23% is not State-supportable.

Table 6. Seismic Priority Group Building Count and Area ^{1, 2}		
Priority Group	Building Count	Approx. Building Area (Square Feet)
A	358	18,166,000
B	394	16,896,000
C	831	8,985,000
A, B and C	1,583	44,047,000

Table 7. Estimated Costs to Address Seismic Improvements for Priority Group A, B and C Buildings ²⁻⁸								
Priority Group	Total Capital Need	Seismic Need	DM	Other Capital Need	State	Non-State	F	FNI
A	\$ 7,446	\$ 4,531	\$ 1,543	\$ 1,372	84%	16%	25%	75%
B	\$ 9,620	\$ 6,541	\$ 1,278	\$ 1,801	77%	23%	0.5%	99.5%
C	\$ 3,047	\$ 1,901	\$ 1,092	\$ 54	62%	38%	0.3%	99.7%
A, B and C	\$ 20,113	\$ 12,973	\$ 3,913	\$ 3,227	77%	23%	10%	90%

TABLE 6 AND 7 NOTES:

1. Building count summaries do not distinguish between seismically separate structures within multi-building complexes.
2. Priority Groups A, B and C include both state and non-state supportable buildings.
3. Approximate costs are provided in millions of dollars (i.e., \$000,000's)
4. Costs provided are approximate and based on limited project information, please see below for additional cost assumption details.
 - a. "Total Capital Need" includes estimates costs of "Seismic Need," "DM," and if currently known/available "Other Capital Need."
 - b. "Seismic Need" refers to seismic improvement scope, and building code updates triggered by the seismic improvement scope, plus associated project soft costs.
 - c. Deferred maintenance (DM) refers to DM scope, plus associated project soft costs.
 - d. If currently known/available, "Other Capital Need" refers to energy efficiency upgrades, program upgrades and other building code updates not triggered by seismic improvement scope, plus associated project soft costs.
5. "State" = Approximate percent of Total Capital Need that is State-supportable
6. "Non-State" = Approximate percent of Total Capital Need that is not State-supportable
7. "F" = Approximate percent of Total Capital Need in which funding is identified or proposed
8. "FNI" = Approximate percent of Total Capital Need in which funding is not identified

Conceptual Timeline

The compliance deadline to achieve a seismic performance rating of IV or better for all University facilities covered by the Policy is December 31, 2030. Priority Group A buildings represent those of the highest priority and must be addressed in a reasonable time frame. Priority Group B buildings are those planned for improvement either concurrent with or following Priority Group A buildings. Priority Group C buildings are those planned for improvement either concurrent with or following Priority Group B buildings.

Currently, ten Priority Group A projects are funded and planned to be completed by the end of calendar year 2030, while some Priority Group A, B and C projects may not have funding identified, or may not have defined solutions for implementing seismic improvements. Plans will be developed over time, in parallel with the need to address other life safety and code requirements, DM, program improvements, and availability of funding.

C. CHALLENGES

While UC is actively progressing towards addressing DM needs and completing seismic improvements in a reasonable timeframe, there are challenges faced by the University and individual campuses and locations towards meeting these goals. For example:

Funding and resources: The current anticipated DM and seismic capital need exceeds campuses' funding, debt capacity, and staffing availability. Investment in capital assets must consider the most effective utilization of limited resources, leverage opportunities to combine aging capital asset improvement efforts (e.g. DM + seismic + program modernization), and contemplate outside investment and resources.

Disruptions to core University business functions due to construction: Continuity in instruction and research may be impacted due to lack of available, appropriate swing space. The scale and magnitude of required planning and coordination increases complexity, and often times necessitates decanting of space, and/or construction of appropriate replacement space.

Other University needs: Seismic safety and DM are essential for supporting and achieving UC's mission. Implementing seismic safety and DM improvements will impact other campus priorities and goals.

UCOP is working in collaboration with UC campuses and locations and our State colleagues to identify strategies for addressing these challenges.
