**INSURANCE CARRIER REQUIREMENT**

As a condition under the University’s Builder’s Risk Program, the insurance carrier has the right to inspect the projects insured and make loss control / prevention recommendations.

The purpose of these loss control / prevention inspections is to:

1) Confirm that the project is properly underwritten based on the information provided by the University Project Management / Contract Administration team on the Builder’s Risk Application;

2) Ensure the University has taken precautions to prevent / mitigate property losses;

3) Provide the University with recommendations of additional loss control / prevention measures to reduce the risk of loss.

**TIME COMMITMENT & PROCESS**

Depending on the project, a loss control / prevention inspection may encompass 1 to 4 hours of time (including preparation of materials for review.) The process is:

1) The insurance carrier’s loss control / prevention engineer will contact Willis to request an inspection;

2) Willis will coordinate with the University Project Management / Contract Administration team to schedule a date, time, and location;

3) Willis will confirm with the participants from the insurance carrier, Willis, and the University Project Management / Contract Administration team. Someone from the University Project Management / Contract Administration team will need to be available on the day of the inspection to address specific questions and accompany the carrier’s loss control / prevention engineer and Willis on the project site walk.

4) Prior to the scheduled inspection, Willis will provide the insurance carrier’s list of information that will need to be made available for review on the day of the inspection. The second page of this document provides a sample list of possible items or questions. To reduce the amount of time expended on the day of the inspection, it is suggested that a room or desk be set aside at the project site for the insurance carrier loss control / prevention engineer to review the documents. After review, the Project Management / Contract Administration team can address any specific project questions and then accompany the loss control / prevention engineer and Willis on the project site walk.

4) At the conclusion of the site inspection, the insurance carrier’s loss control / prevention engineer will share the findings / recommendations with the Project Management / Contract Administration team.

5) The insurance carrier’s written report will be provided to Willis who will forward the report to the Project Management / Contract Administration team, local Risk Management, and UCOP Risk Services.

6) The University Project Management / Contract Administration team is responsible for addressing any action item(s). A written response to the action item(s) should be addressed to the insurance carrier’s loss control / prevention engineer and emailed to Willis, local Risk Management, and UCOP Risk Services. Willis will forward the written response to the insurance carrier.

**QUESTIONS? CONTACT**

Willis Insurance Services of California, 525 Market Street, Suite 3400, San Francisco, CA 94105

07/01/15
As part of the inspection, the insurance carrier’s loss control / prevention engineer will request to review specific information on the project. Following is a sample of the types of information and/or questions:

- Project’s physical street address
- Name and address of the Architect, Engineer, Contractor and, if applicable, the Construction Manager
- Architectural Construction Drawings including site plan and building elevations
- Location of the nearest fire hydrants (should be on site plans) and Fire Department Stations
- Schedule of Estimated Values and Major Equipment (switch gears, transformers, pumps, a/c)
- Updated Project Values and Completion Date
- Estimated % of completion at time of the site inspection
- Construction Critical Path Schedule and major completion dates
- Construction Site Security Plan
- Geotechnical Report
- Topographical Plan
- Latest pay request cover sheet (showing total contact amount and amount paid out to-date)
- Test results for the sprinkler system and approved sprinkler submittals or as-built drawings
- A brief discussion of the campus and/or medical center history with the contractor and the contractor’s prior experience with this type of project
- Type of construction? (Precast Concrete, Tilt-up Concrete Slab, other)
- What type of Construction Contract? (i.e., Lump Sum, Cost Plus, etc)
- Where are the major (critical) construction components coming from and how are they to be shipped?
- Where will construction materials and major items be stored?
- Are there any tunnels, bridges, or excavations deeper than 30 feet associated with the construction?
- Any site testing of equipment?
- Is it Union construction?
- What is the project float time?
- What are the long lead items?
- Is the project on schedule?
- Does the project have construction phase scheduling? (i.e., handed over to the University in phases)
- Are there any hazards in the proximity of the new structures?

NOTE: Projects may be scheduled for inspection at 25% and 75% completion. Unless there have been changes, most of the information may only need to be provided at the initial inspection.
